### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 7, 9, and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Hsien (6,655,449).

Hsien discloses a cold plate having the claimed structure including a base having a groove with a first end and a second end (see Fig. 1) connected to the inlet and the outlet (41 and 42), a plate installed on the base, a vortex generator (31), the inlet and outlet (41 and 42) being on the plate (see Fig. 1).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-6, 8, 10-14, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsien (6,655,449) in view of Lee (5,361,828).

Art Unit: 3742

Hsien, as discussed above, discloses the claimed structure with the exception of the vortex generator being formed by unparallel and symmetrical ribs, each rib having a sharp portion and the appearance of a triangle.

Lee teaches the use of a vortex generator which is formed by unparallel and symmetrical ribs, with each rib having a sharp portion and the appearance of a triangle. Note that Lee shows each corner of the triangular ribs as being sharp.

It would have been obvious in view of Lee to give the vortex generator of Hsien the form of triangular ribs, the motivation being to obtain improved heat transfer characteristics.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schulze et al, Takiura et al, Park et al, Hughes, Modine, Kuethe, and Rogers et al each show heat transfer ribs having a triangular configuration.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa J. Walberg whose telephone number is 703-308-1327. The examiner can normally be reached on M-F 9:00 - 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 703-305-5766. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
